

Implementation Approach:

EXA PEF in SAP Environments (Exemplary Product Delivery*)

EXA PEF is an extension of EXA Global Value Chain (EXA GVC) and works best in combination. EXA PEF is also part of the EXA Global Intercompany Management Suite.

The typical implementation approach consists of two main steps:

1. Set up the cradle to gate carbon chain of the products:

- Attribute the CO₂e emissions to each step of the carbon chain

2. Data Integration

- While the system is an SAP add-on, which can also seamlessly ingest data from non-SAP applications even if the master data are not harmonized

*Assumes implementation of standard functionality for monitoring/reporting only, no custom development
