

Technical Architecture & Core Components: Details EXA GVC in SAP Environments

GVC Technical Overview

Built on SAP Standards

- Runs as a standard SAP® add-on on the SAP NetWeaver® stack and SAP HANA® in-memory database, ensuring scalability and leveraging accelerated processing power. The capability to run EXA GVC in hybrid scenarios (e.g. with both SAP ECC 6.0 and SAP S/4HANA)
- Provides a modern, customizable Fiori interface for seamless access via web browsers.

Security & Development

- Delivers SAP-based security access controls to support diverse enterprise security concepts.
- Developed in a separate namespace, ensuring no interference with custom developments.

Integration & Data Management

- Offers pre-configured SAP plug-ins for fully automatic, recurring data loads from SAP source systems.
- Includes a file upload interface for non-SAP sources, enabling hybrid integration scenarios.

Flexibility & Transition

- Operates in hybrid landscapes (e.g., SAP R/3 and SAP S/4HANA).
- Fully supports system transitions during S/4HANA migrations.

Certification

- Certified by SAP for interoperability with SAP S/4HANA, ensuring reliability and compliance.
